

Error reported	Possible cause
command not found	not in path/permissions not set
permission denied	chmod not set right
invalid syntax	missing colon
name error	variable misspelled function that needs an imported from a module trying to add to a variable (list or string) that was not originally defined
attribute error	misspelling in built-in function. Value.function() -- the 'dot' part that comes after variable
type error 'int' object is not callable	variables -- parentheses after a list instead of square brackets (making it be interpreted as a function)
traceback...zero division error	some function returned zero when not expected. check input to make sure strings exist
bad interpreter not a directory	shebang line messed up
type error tuple	function parameter interpreted as a list. two sets of parentheses without a connector (x+y) (a+b) where it should be
indentation error	um....
invalid syntax	missing colon, missing close parentheses
